- Specialized in: Data Warehousing, ETL processes and Business Intelligence
- MS SQL Server certified (MCDBA, MCTS, MCITP, MCSE – BI, MCT)
- Co-leader of Warsaw Data Community Chapter
- Co-leader of Warsaw Power BI User Group

# What's Dynamic SQL?

- SQL code that is concatenated and passed for execution
  - Usually called as an ad-hoc query
- DB layer code
  - Concatenated and executed within “master” SQL code
- Application layer code
  - Concatenated in application/service code and passed to SQL Server for execution

# Why not to use Dynamic SQL?

- SQL injection prevention
- DB policies
- Plan cache bloat
- Improper use

Thank you...
